Organic MCT Oil

Presentation by
www.primaryinfo.com

Medium Chain Triglycerides (MCT) are mixed triglycerides of saturated fatty acids with a chain length of 6 to 12 carbon atoms, mainly C8 (caprylic acid) and C10 (capric acid).

Organic MCT₂ contains the smallest C₁₂ content (< 2%)

MCT Oil can be obtained in two ways, by Chemical recombination of refined fatty acids coming from coconut oil with glycerine, or directly by **Molecular distillation of virgin coconut oil**

The first product is a synthetic vegetable based ester, and as such is subject to REACH registration. The second one is a 100% natural product, processed with physical treatments only, and as such is exempt from REACH.
